Governor Gray Davis
State Capitol
Sacramento, CA 95814

Dear Governor Davis:

I urge you to use the powers of your office to improve the long-term quality of California's rivers and drinking water. Given this state's growing population, these issues can't be ignored or dealt with in a "business as usual" approach.

Specifically, I ask that the CALFED program be used to effectively and rationally manage California's water resources during the next five decades. Among other things, CALFED could enforce water pollution limits; ensure adequate fresh water in the state's rivers and bays; and put a priority on water efficiency by setting a seven-year moratorium on the construction of new reservoirs or dams.

Thanks for your attention in this very important matter!

Sincerely yours,

Steven Roesch

1. 1990年12月29日，全国人大常委会通过了《中华人民共和国香港特别行政区基本法》。

1. 1990年12月1日以前，
 2. 1990年12月1日以后，
 3. 1990年12月1日以后，

1. The first step is to identify the problem. This involves understanding the current situation and the goals that need to be achieved.

It is a common practice to use a "dummy" variable to represent a categorical variable in a regression model. This variable is used to capture the effect of the categorical variable on the dependent variable. The dummy variable is typically coded as 0 or 1, where 0 represents the reference category and 1 represents the category of interest. The coefficient of the dummy variable represents the difference in the mean of the dependent variable between the two categories. For example, if the dependent variable is "sales" and the categorical variable is "region", then the dummy variable for the "North" region would represent the difference in sales between the North and the reference category (e.g., "South").
